SPACE PAY

Current payment methods

The technology behind payments have gone forward but the effort of paying has not changed.

Card payments made it easier to leave cash behind at home and NFC & QR Code payments made it easier to leave the wallet behind.

But, the process of making payments has still remained the same which depends on using an object to make a payment.

Taking your wallet out vs. taking your phone out.

Effort is still the same! Hasn't changed much...

QR-Code Payments

SPACE PAY

Our Solution

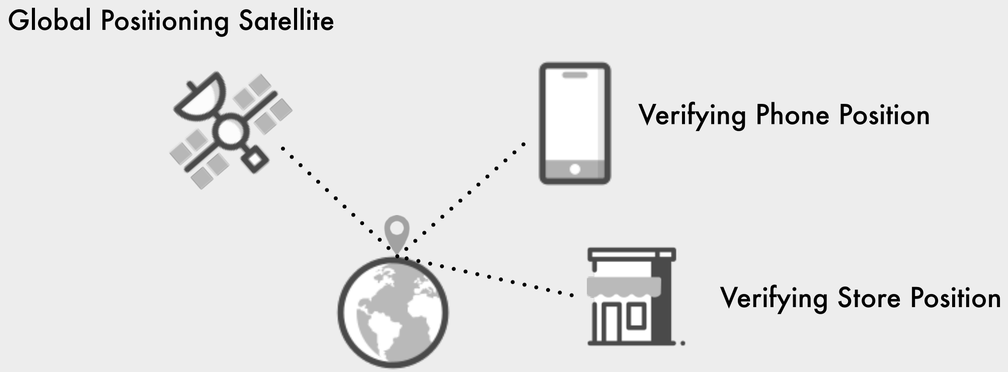
SpacePay has built a **Global Positioning Payment Authentication System** that does not depend on a near field authentication, challenging existing mobile payments.

Leave your phone in your pocket and simply **enter a pin** and the payment is successful. It's that simple.

GPPAS is a **patent pending** proprietary technology built by SpacePay used to authenticate payments.

How does GPPAS work ? (Patent Pending)

Global Positioning Payments Authentication System identifies a user with a space code and authenticates by verifying the phone position and the store position to approve a transaction.

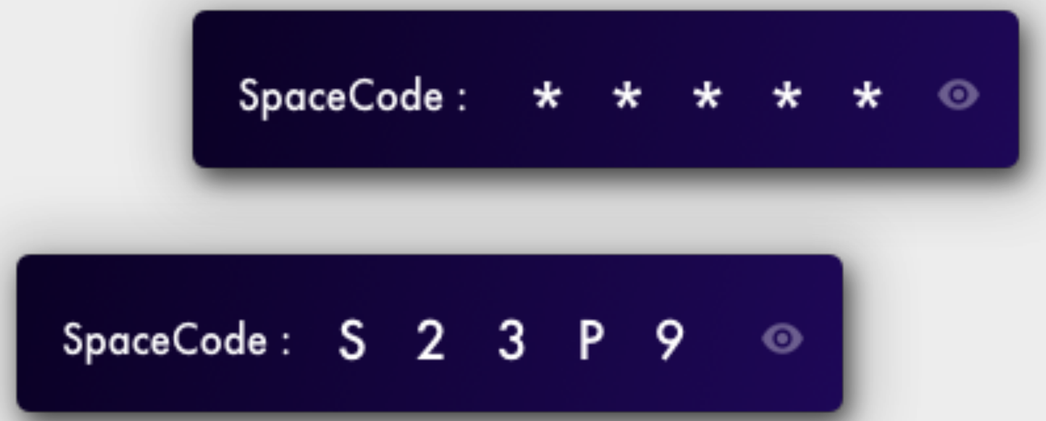


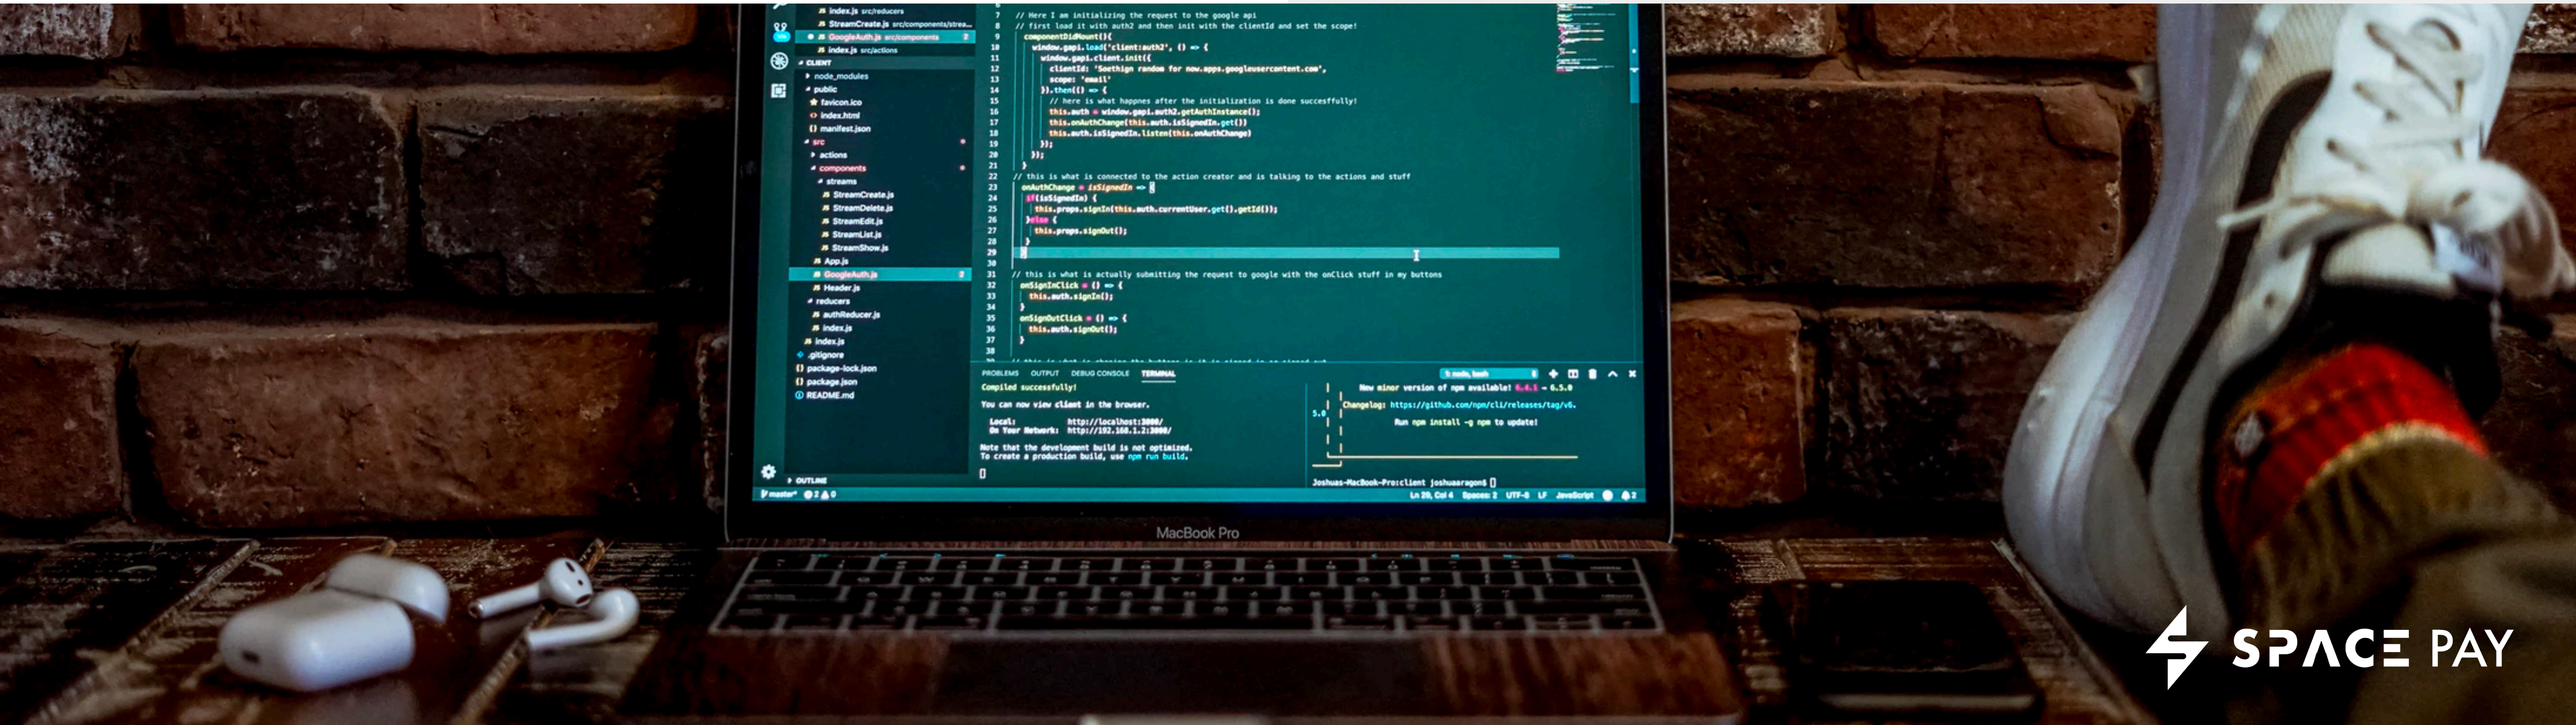
User enters the **space code** and GPPAS authenticates the payment.

SPACE PAY

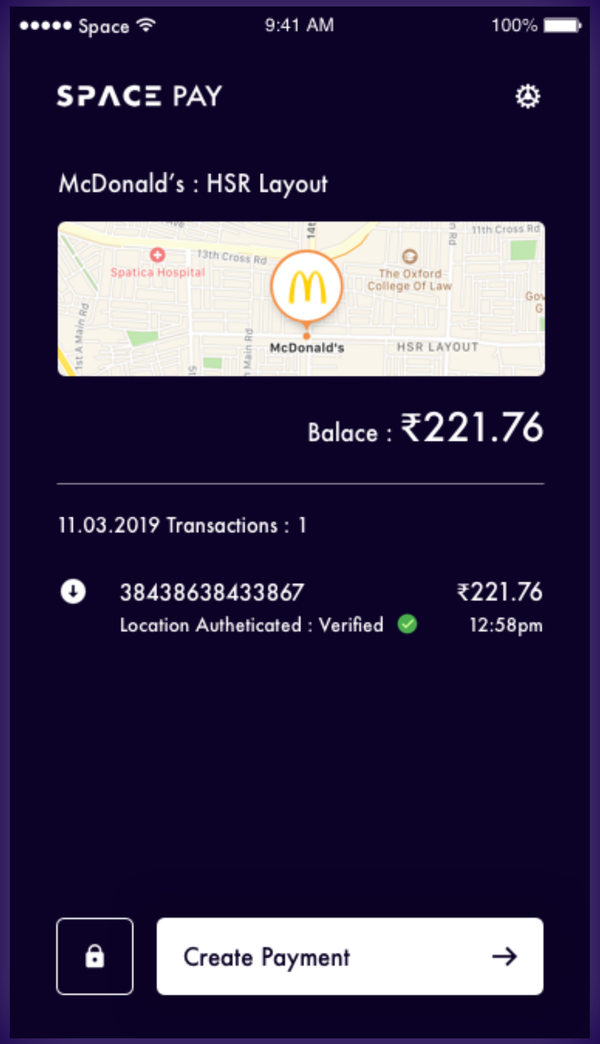
What is a Space Code ?

SpaceCode is a 5 digit alpha numeric code generated by space servers for a user to identify and authenticate payments.





Merchant App



The Applications

Merchant App allows users to accept payments from customers.

- Get reports and tax reports for all payments.
- Automatically withdraw when the wallet reaches ₹50,000.

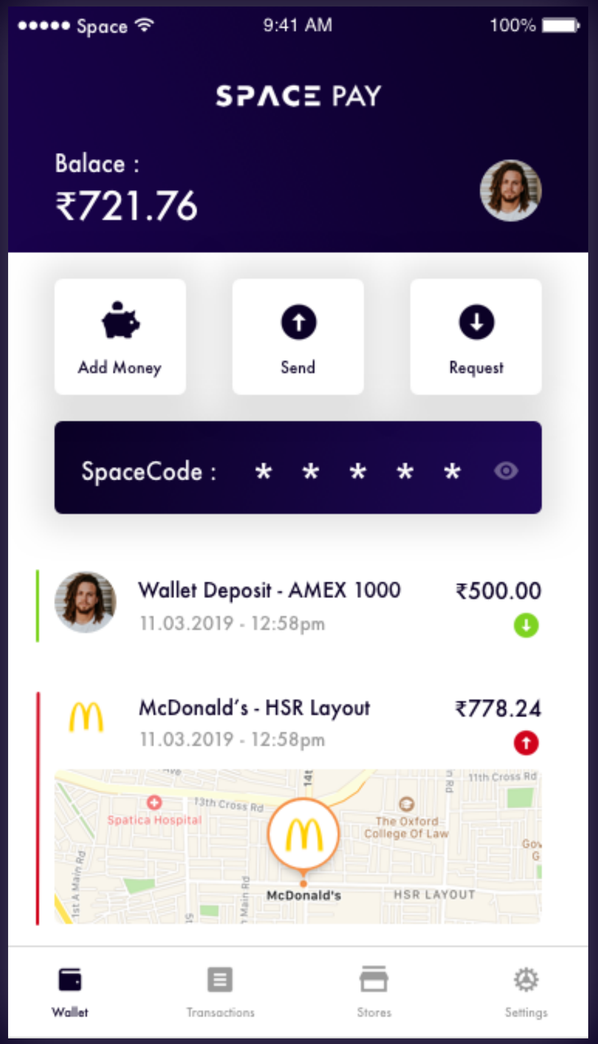
.....

Consumer App allows users to pay at stores using just the Space Code.

- Send and receive money from friends.
- Receive deals and offers from merchants as you enter the store.

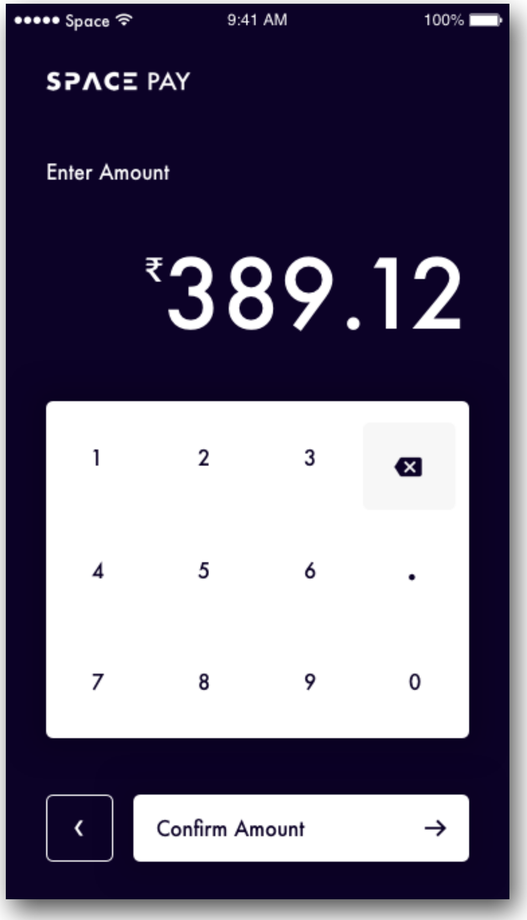
SPACE PAY

Consumer App

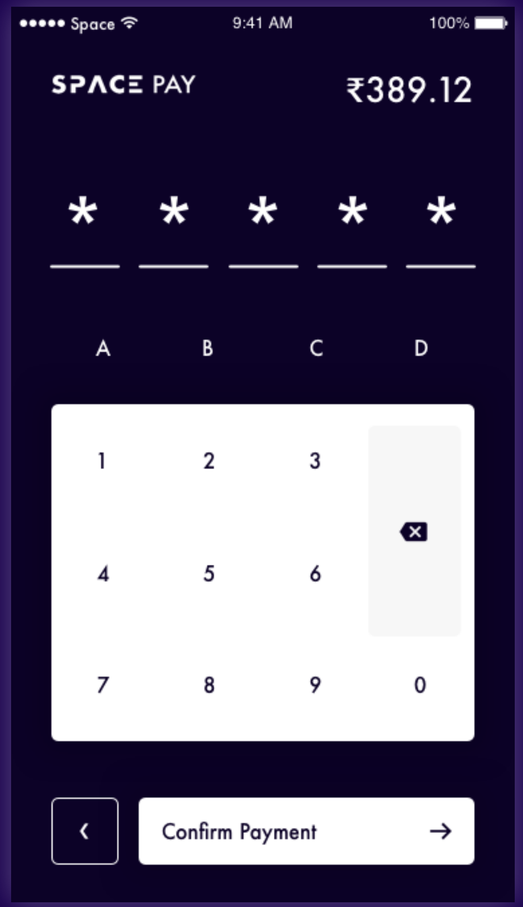


How do you pay ?

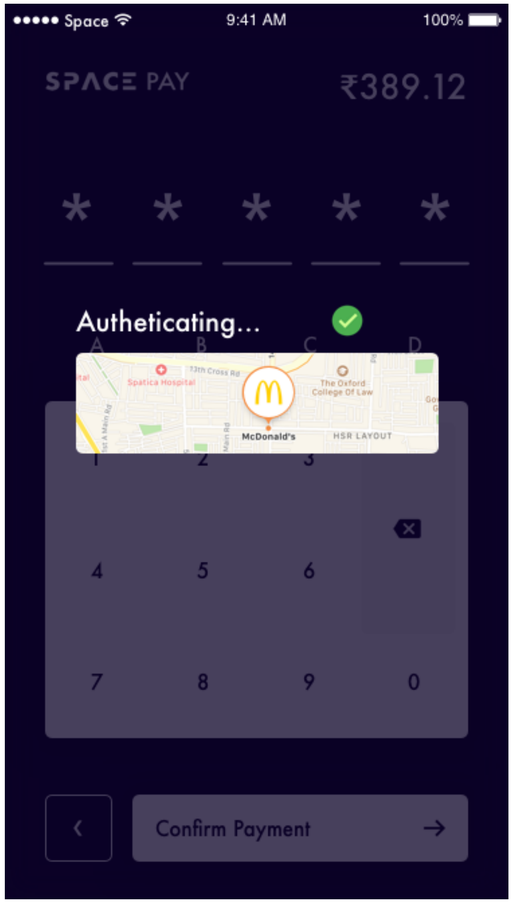
SPACE PAY

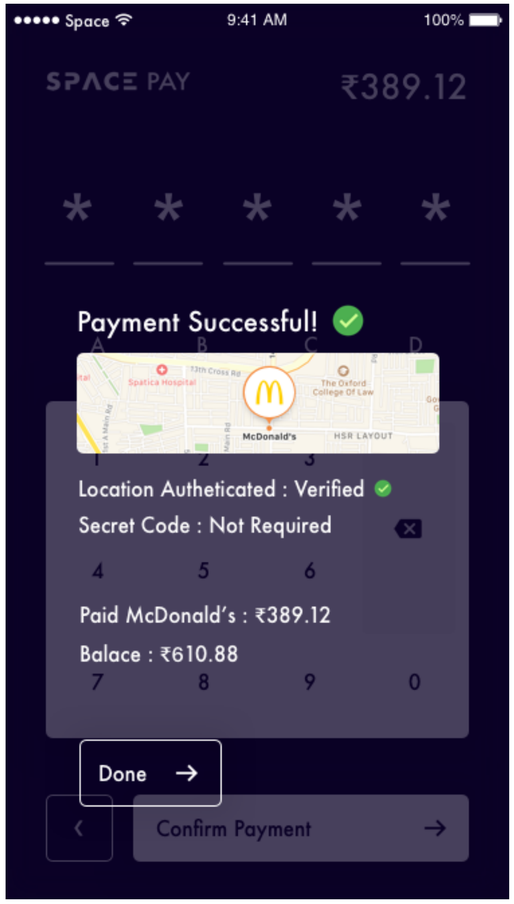


Merchant enters the amount and gives the device to the customer.

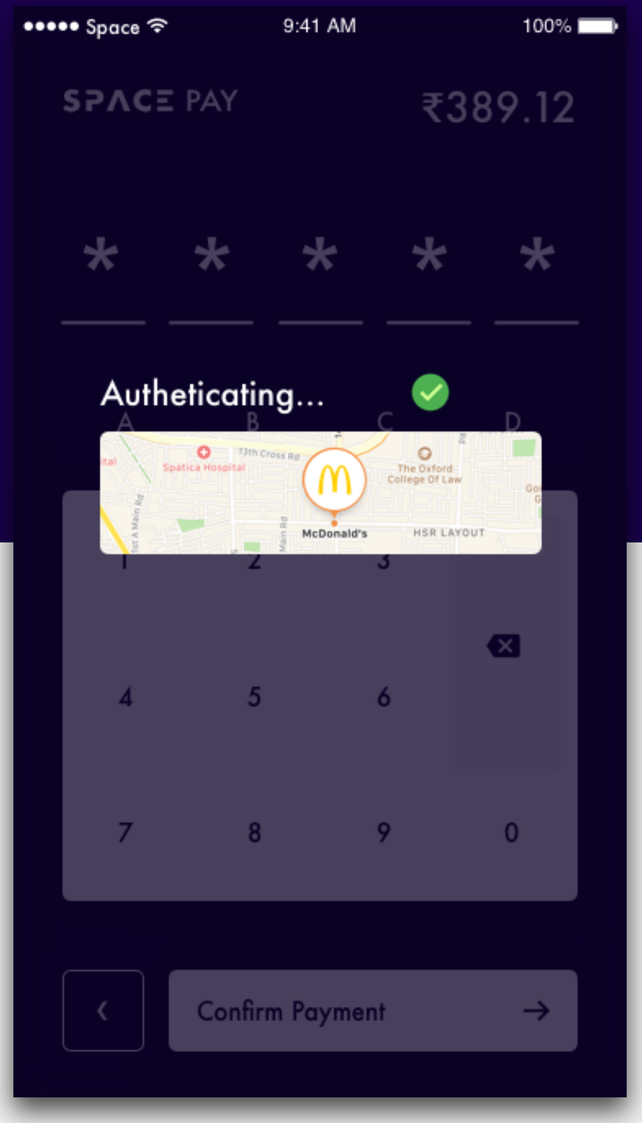


Customer enters the SpaceCode





Space servers authenticates and approves the payment upon GPPAS verification is done.



Secondary Authentication

In case of Dual Authentication is required or has been enabled by the user the following method will be applicable.

Merchant's Why use Space Pay?

1. With SpacePay's location data, merchants can receive analytics on customer behavior ex. how often visit the store, frequency of visits, time spent in the store, where the customers are coming from.

2. Location based marketing campaigns to attract new customers with discounts and offers that could drive visitors into the store.

Customer's Why use Space Pay?

1. Faster way to pay with less friction. Offline payments without the phone and cards with just the SpaceCode.

2. 1% Cashback from all participating merchants that opt for the 2.5% transaction fees.

SPACE PAY

Financials

To acquire 20000+ space pay enabled merchants and receive a PPI License from the RBI.
